

In this project we used, MySQL for the database, Spring Boot for the backend and ReactJS for the frontend.

1. You will need to install XAMPP in your computer to run this project, install it, run it, and start Apache and MySQL. Create a new database called "fullstack"
2. Then Install NodeJS and npm, and run npm install to install all dependencies.
3. To run it first run the "StudentsystemApplication.java" file which will run the backend
4. Enter the folder called "studentsystemfront", open the terminal and run the command npm start.
5. Now in this page you could add each student with its location by typing them in the corresponding fields and pressing submit. The current students are shown below with their id.
